Michell's Dutch Tulips

IT'S EASY TO GROW BULBS

TULIPS—Plant in late September to December before hard freezing weather. Set 4 to 5 inches deep (to the bottom of the bulb), 4 to 5 inches apart, in any location in any good garden soil, but perfect drainage is important under all conditions.

NARCISSI—Very early fall planting an advantage, about 6 inches deep, 3 to 6 inches apart, depending upon size of bulb. Delightful for naturalizing. Plant in clumps (at least 6) in perennial border, in foreground of shrubbery or evergreens.

After covering bulbs with soil, spread some MICHELL'S BONE MEAL over area planted.

A mulch of leaves or peat moss should be applied when the ground begins to freeze, and removed in spring after danger of heavy frost is past.

Moles, mice and chipmunks will not eat bulbs if the surface of the beds is dusted with Naphthalene Flakes.

HINTS TO REMEMBER

After blooming, bulbs should be left undisturbed until the foliage has turned yellow or brown which indicates the stored up food has been returned to the bulb for next year's bloom.

Remove faded flowers close to the top of the stem before seed pods form, to preserve vitality of bulbs.

It is not necessary to dig bulbs after blooming. Never dry bulbs in the sun. For best results, always plant some new bulbs every year.

NARCISSI

At Prices Everyone Can Afford

The terms Daffodils, Narcissi and Jonquilla cause confusion. The tendency is to apply **Daffodil** to varieties of which the trumpet or corona is as long or longer than the perianth segments. **Narcissi** is used for varieties having large and small cups. **Jonquil** is distinguished by nearly round rush-like leaves and small deep yellow sweet-scented flowers appearing in clusters on the stem. The name Narcissi is actually the name of the entire genus.

Pot Culture: Plant from September to November, using a 4- or 5-inch pot for single bulbs or several bulbs may be planted in a larger pot or bulb pan. After planting, water well and put in a cool, dark, airy place until well rooted, after which remove to a cool room and later to a warmer room.

"Green Velvet" FOR FINEST LAWNS

Fall's the Time — Michell's the Seed

LAWN SEED specialists for 62 years, MICHELL'S have developed the know-how of formulating superior grass seed mixtures particularly adapted to this area. Constant experimenting enables us to offer lawn seed mixtures of highest purity and germination, with maximum resistance to weeds and fungus diseases. The cool, moist weather of late summer and early fall affords an ideal condition for establishing a new lawn, or rebuilding an old one. We recommend sowing 5 pounds per 1000 sq. ft. for new lawns, or half this amount for renovating lawns.
